Iteration 2 Review for Team 7

Finder	Severity [major, minor, open issue]	Kind [missing, extra, wrong]	Defect Type	Description
Team 6 - Hannah	Open Issue	Missing	Design Defect	In your document, it says that a user cannot put a negative value into the timer field. However, what happens if a user does try to put a negative number in the field? Will they receive an error on the screen?
Team 6 - Hannah	Open Issue	Missing	Design Defect	There are increment and decrement buttons when changing the timer values. What happens when the value is at 0 and the user tries to decrement? Will it stay at 0 or will it go to the negatives?
Team 6 - Hannah	Minor	Missing	Functionality	It might be a helpful feature to allow the user to choose the order in which their break suggestions will appear, in case they want to plan a precise routine for their session. Since the break suggestions are currently randomized and non-repeatable and they are allowed to create their own custom break

				suggestions, allowing the users to choose an order for which their break suggestions will appear can help them follow their own custom routine when using your timer.
Team 6 - Hannah	Minor	Missing	Functionality	Do the new break suggestions only appear when the user manually clicks on the "New Suggestion" button? A new feature could be for a new suggestion to appear every other minute, or for a pool of suggestions to evenly cycle throughout a certain timer session.
Team 6 - Hannah	Major	Missing	Design Defect	When the timer starts, the "Start" button switches to a "Pause" button. The document says that after clicking on this "Pause" button, it will be replaced with the "Start" button again. Will clicking on this "Start" button resume the timer or will it restart the timer? If doing this resumes the timer, is there a button the user can press to restart the timer if they want to do so?
Team 6 - Puskar	Open Issue	Missing	Functionality	The document says the user data display feature will be implemented, however I couldn't find the description on how that will be done. What metrics will be used to create the graph and what information is the user supposed to get from the graph?
Team 6 - Puskar	Major	Missing	Design Defect	When a 25-minute work interval or break interval ends, how will your web app notify the user that break/work interval is ended? I couldn't find this information in the doc. Will there be a sound alert or text alert saying that the interval is ended when the user is not actually on the webapp window?
Team 6 - Puskar	Open Issue	Missing	Functionality	Will the user be able to remove the activities in the break suggestion. In the document, I can see that there is an option to add break activities but not remove the activities that the user wants. Also, Can users be able to choose which break activities to display at certain break intervals instead of generating random suggestions?

Team 6-Safi	Open Issue	Missing	Functionality	I think there should be a limit to the number of minutes because if they put too big of a number it wouldn't make sense to allow the timer to run for that long. Like if they put in the time for 20 years then that would just be too much to handle I would think.
