Iteration 2 Review for Team 7

Finder	Severity [major, minor, open issue]	Kind [missing, extra, wrong]	Defect Type	Description
Team 6 - Hannah	Minor	Missing	Functionality	There is no way for users to request a password change or an email for resetting their password on the login page, in the case that the user forgets their password and cannot get into their account.
Team 6 - Hannah	Open Issue	Missing	Functionality	Is there some way for users to be notified whenever the timer runs out? Will the screen flash when the timer runs out or will there be some sort of sound alert. I think this would be an important feature, since without this, the timer would pretty much be useless to the user if they are doing other things in different tabs on their device, unless they remember to check the pomodoro timer frequently.
Team 6 - Hannah	Open Issue	Missing	Functionality	The sounds feature is not elaborated on in the document. Is the relaxing sounds customizable, as in can the user

				enable/disable the sounds or choose from a variety to listen to?
Team 6 - Puskar	Open Issue	Missing	Functionality	The document says the user data display feature will be implemented as an extra feature, how will this feature be implemented. What metrics will be used to create the graph and what information is the user supposed to get from the graph?
Team 6 - Puskar	Minor	Missing	Functionality	As mentioned in the doc, the database stores a user's login information, user configuration, and user to-do list items, but what about the break activities? Will a user be able store their break-activities items as well so that each user has customized suggestions.
Team 6- Puskar	Open Issue	Missing	Functionality	The homepage after/before sign in has a tab called "Timer settings". What are the settings that a user will be able to edit in this app? It is not clearly mentioned in the doc on how a user can benefit through this.
Team 6- Safi	Major	Missing	Functionality	It is said that there will be sounds that can notify the user, however if it's not implemented then it will be very difficult for the user to be notified. Let's say they are on a different tab. How would the timer let them know to take a break if the timer is in the background.
Team 6- Safi	Open Issue	Missing	Functionality	Will the specific tasks be saved in the database for each user when they log in. This should be something that is considered because then there is no reason for a database.
